

Protect your fleet with a breakthrough in surface protection.

*EcoSeal's proven, patent-pending products dramatically reduce operating costs by delivering the only penetrating sealants that go beyond coating to help eliminate corrosion and lock out environmental hazards.*

*You and everyone else in the transportation industry face mounting pressures to conserve fuel, improve passenger environments and, overall, do more with less. EcoSeal can help you make dramatic progress toward these goals by introducing just one new breakthrough product in your asset maintenance process.*

#### **Completely seal surfaces and save money.**

Although applied like spray wax, EcoSeal Indoor and Outdoor aren't petroleum-based wax or polish products at all. They're non-toxic, eco-safe nanotechnology sealants—rather than simply provide a coating, they completely seal the pores on every surface of your air, marine and highway fleets. Nanotechnology is a relatively new science that allows the fine-tuning of materials at a molecular level, vastly improving their qualities.

As a result, EcoSeal products are scientifically proven to block out rust, corrosion, bacteria, mold and pollutants on any surface you apply it to—from painted and metallic surfaces to vinyl, rubber, plastic, fiberglass and composite surfaces—you name it. The surface becomes so smooth and slick that little can stick to it, including water, ice, dirt and grime.

EcoSeal products advanced surface protection means you only have to re-apply them about every three or four cleanings—and you only need to clean half as often—greatly reducing operating costs, and delivering the best looking finish you've ever seen, plus longer equipment life.

*EcoSeal products use next-generation technology to advance surface protection.*

EcoSeal's product family—EcoSeal Indoor and EcoSeal Outdoor—is a surface sealant, purifier, protectant, and drag reducer all in one. Simply apply on a clean surface and buff like you would a polish or wax, then enjoy long term protection with easy-to-clean, protected surfaces that are more aerodynamic and hydrodynamic.

**EcoSeal products are the only broad light spectrum, deep-penetrating, complete surface sealants available:**

- Patent pending
- Proven in laboratories and in government applications
- Proven at high altitude and ocean's depths
- Not subject to dangerous goods regulations
- Natural activating ingredients are considered GRAS (Generally Recognized As Safe) by FDA and USDA

**The incredibly smooth finish of EcoSeal benefits vehicles of all types:**

- Reduces drag and ice buildup on airplanes
- Minimizes bio fouling and maintenance on maritime vessels
- Preserves original finish on trucks and cars
- Meets military and commercial aviation specifications

**Use new science to your benefit.**

EcoSeal products use a patent-pending formula that triggers a natural, light-activated process, making treated areas react with sun and ambient light in a way that kills germs, deodorizes and even improves the energy efficiency of surfaces like windows. In addition, EcoSeal products dry clear and add no weight or dimension to the surface, yet nonetheless makes it stronger.

**Get vastly better performance than standard finishing products.**

EcoSeal products come ready to use, so there are no complex, time-consuming formulas to mix and manage. Simply clean surfaces as usual, apply EcoSeal and buff to a rich sheen. Walking surfaces require special protection treatment, and we have products for them as well.

**Extend asset life and reduce fuel use.**

From interior and exterior surfaces to accessories, sidewalls, dashboards, lights, instruments, seat backs and more, EcoSeal-treated surfaces require less cleaning, thereby reducing exposure to harmful solutions that can shorten asset life. Better yet, on

exterior surfaces EcoSeal Outdoor's ultra smooth finish minimizes aerodynamic and hydrodynamic drag, reducing fuel consumption from 1% to nearly 7% in tests. In addition, it works on windshields to save wiper blades, as rain sheets off, and snow easily slips off treated surfaces for easy cleaning in cold environments.

**Contribute to your sustainability goal.**

With no harmful VOCs, PTFEs, oils, petroleum distillates, silicones, waxes and other environmental pollutants, EcoSeal products are about as environmentally friendly as you can get. And because an EcoSeal-treated surface is completely sealed, you can perform interim cleanings with nothing more than water—no chemicals.

**Create healthier environments.**

The science behind EcoSeal Indoor helps treated interior surfaces to remain free of bacteria, viruses and germs. The photo-catalytic process also neutralizes gasses that cause odor and can damage lungs. The result is a naturally cleaner, healthier environment—so much so that air passing over a treated surface is healthier than other ambient air!

**A better choice for transportation management.**

With all the fuel-saving, environmental, logistical, manpower, health and economical benefits of EcoSeal's products, now transportation managers have a better way to address many of the pressures the industry faces in protecting their fleets.
