

EcoSeal's proven, patent-pending products use natural ingredients to make your home self-sanitizing without poison and self-deodorizing without chemicals.

Everyone wants to keep their family healthy and safe and their home clean and comfortable. Our family of products helps you do just that. You will spend less time cleaning and more time enjoying family and friends.

EcoSeal products use next-generation nanotechnology to advance surface protection and performance.

- **EcoSeal** uses nano-sized polymers to seal the smallest fissures and fine imperfections even on glass.
- Germs have no place to hide and grow.
- Same with mold and mildew.
- Light makes natural mineral components become effective, efficient sanitizers – better than bleach.
- The sanitizing aspect goes on as long as there is light – indefinitely
- The same minerals neutralize organic odors and protect from sun damage.

Completely seal surfaces and save money.

Apply by spraying or wiping. EcoSeal products are: Non-Toxic, Non-Allergenic, Silicone-free, PTFE-free, Wax-free, Petroleum-free, Oil-free and VOC-free. Safe and fast-acting, EcoSeal products penetrate micro structures, porosity and voids — to seal every surface in your home or on your vehicles.

Nanotechnology - the “new science” that improves material qualities and performance at a molecular level. As a result, EcoSeal products are scientifically proven to block out rust, corrosion, bacteria, mold, pollutants and protect from UV

It harnesses light to make surfaces self-cleaning and self-sanitizing, improve thermal insulation, eliminates static, deodorizes, neutralizes VOCs, and more - on any surface, hard or soft.

Traditional “cleaning” uses soaps and surfactants to float soil out of imperfections in a surface and bleach and other poisons to temporarily kill bacteria and mold.

EcoSeal uses the most advanced technology to seal surfaces against soil and photocatalytic oxidation (PCO) to “cook” germs and mold spores with light.

Many ingredients in common household cleaners, sanitizers and air freshening products are known poisons and carcinogens.

EcoSeal products are the only broad light spectrum, deep-penetrating, complete surface enhancers available:

- Patent pending
- Proven in laboratories and in government applications
- Proven in homes and on highways
- Environmentally friendly – safe for family, friends and pets.
- Natural activating ingredients are considered GRAS (Generally Recognized As Safe) by FDA and USDA

Startling facts about the health of your home and your family

- In one decade Asthma has increased 29% for men and 82% for women – believed due women’s exposure time to household chemicals*
- 150 chemicals found in your home are connected to allergies, birth defects, cancer and psychological disorders*
- Infants, toddlers and the elderly are most effected by indoor chemical concentrations because they spend more time indoors and their immune systems are weaker*

Use new science to your benefit.

EcoSeal products use a patent-pending formula that triggers a natural, light-activated process, making treated areas react with sun and ambient light in a way that kills germs, deodorizes and even improves the energy efficiency of surfaces like glass. In addition, EcoSeal products dry clear and add no weight or dimension, yet densify and strengthen.

Get more time for yourself.

EcoSeal products come ready to use, so there are no complex, time-consuming formulas to mix and manage. Simply apply to clean surfaces. Penetrates in seconds. Dries in minutes.

Extend asset life and improve the environment.

From interior and exterior surfaces to automobiles, tools, machinery and sports equipment—EcoSeal-treated protective paints, coatings, and metal finishes require less maintenance, last longer, work better, faster, more reliably.

EcoSeal uses no harmful constituents that can affect your safety or the environment.

Contribute to your environments health.

With no harmful VOCs, PTFE, oils, petroleum distillates, silicone, waxes and other environmental pollutants, EcoSeal products are about as environmentally friendly as you can get, because an EcoSeal-treated surface is completely sealed, it often requires no more than cleaning with water - no chemicals.

Create healthier kitchen, dining room, living room, bedroom and play room atmospheres

The science behind EcoSeal products helps treated surfaces to remain free of bacteria, viruses and germs. The photo-catalytic process also neutralizes gases that cause odor and can damage lungs. The result is a naturally cleaner, healthier environment—so much so that air passing over an EcoSeal treated surface is healthier than other ambient air!

A better choice for protecting your possessions

With all the performance, functionality, safety, environmental and economic benefits EcoSeal products help protect your home’s interior and exterior, your cars, fishing, boating and hunting gear.
